

Wind energy consultant for the world

LOWBANKS STANDARD OFFER PROGRAM WIND FARMS

Notice of Commencement of a Screening & Public Information Centre

The PROPONENT is proposing to develop the **Byng and Mohawk Point Wind Farms**, two wind energy project with a maximum capacity of 10 MW each located on land near Byng and Mohawk Point, west and east of Dunnville in Ontario. AIM PowerGen Corporation aims to supply clean energy to the Ontario energy system using state-of-the-art wind energy technology. The Project is being proposed in the context of Ontario's upcoming Standard Offer Program for small renewable energy projects.

The two proposed Project would install 6 X 1.65-MW wind turbine generators (WTG) per project, access roads and an electrical collecting system.

The Byng project is located on privately owned agricultural land in Haldimand County. The land is currently used strictly for agricultural purposes and will continue to be used for this purpose in conjunction with the wind turbines.

The Mohawk Point Project is located on privately owned agricultural land in Haldimand County. The land is currently used strictly for agricultural purposes and will continue to be used for this purpose in conjunction with the wind turbines.

The Projects are subject to the Ministry of the Environment's Environmental Screening Process for electricity projects. Under this process an environmental assessment (EA) will be undertaken to evaluate the projects' effects on the natural and human environment.

Environmental monitoring has already commenced on the site, including a bird study. AIM PowerGen Corporation is planning to hold a Public Information Centre on March 6th 2007. The project is being conducted in accordance with the requirements of both the *Canadian Environmental Assessment Act (CEAA)* and the *Ontario Environmental Assessment Act (EAA)* and is subject to the environmental screening process for electricity / wind farm projects. The applicable guideline that is being followed is the "Guide to Environmental Assessment Requirements for Electricity Projects (March 2001)" provided by the Ontario Ministry of the Environment. Upon completion of the study, an Environmental Impact Statement Report will be filed on public record.

The Public Information will present background information on the projects and wind power, the project layouts and their location, visual simulations, the status of the environmental assessment, various alternatives being considered and the next steps to be followed. This first Public Information Centre (PIC) is an opportunity for the local population to get timely information on the projects and raise any issues with the proponent. The public will be encouraged to provide their comments throughout the project development phase to ensure that concerns can be adequately addressed.

Public Information Centre:

Date: Tuesday March 6th 2007

Location: Six Nations Polytechnic, 2160 Fourth Line Ohsweken

Time: 5 pm to 8:30 pm

For information on the Environmental Assessment, please contact AIM or Hélimax at:

AIM PowerGen Corporation:
